

Integrated camera brings opportunity to cut printed media with an ease.

Compatibility with favourite RIP printing solutions allows operator to prepare cutting data in his printing environment and send cutting data with recognition marks to COMAGRAV cutter/router.

Free of charge plug-in for Adobe Illustrator is available for any customer - it automatically generates registration marks and sends data to the cutter.

The front-end software allows many cutting path transformations depending on position of regmarks and type of job.

List of supported RIPs is available on request.
